

40 Studies That Changed Psychology by Roger Hock

Name _____ Hour: _____ Unit: _____
Title of Article: _____ Number of Article: _____
Researchers: _____
Source (Where was this originally published?): _____ is this a credible source? _____

Hypothesis: Identify the theoretical propositions on which the research is based, in other words, what is the researcher's hypothesis and how did they arrive at that conclusion?

Methodology: Describe the design and methods of the experiment/research using a step by step identification and explanation process:

Results: What were the specific results of the research?

Conclusions: What is the significance of this research? What are possible applications of this research to real live behavior? What are the criticisms of this research?

Required Highlighting: *PINK = Significance, Orange= Applications, Green = Criticisms.*

Note: The purpose of this assignment is to practice identifying the significant pieces of psychological research. Be specific, thorough, and detailed with your explanations. Assume the reader intends to glean all necessary information regarding the study from your evaluation and will not be reading the article itself.
